

CarMax IDP Manager — System Architecture

Owner: Gustavo Felipe Guallar (Associate ID: 280305)
Version: 2.0
Last Updated: 2026-05-22

1. System Overview

The CarMax IDP Manager is an automated document generation and knowledge management system designed to support Gustavo Guallar’s Individual Development Plan (IDP) progression within CarMax Logistics. It organizes all existing materials, generates new documents aligned with CarMax vocabulary and values, and implements a feedback loop where every generated document becomes source material for future generations.

2. Directory Structure

3. Core Components

3.1 Knowledge Base (`knowledge_base/`)

The source-of-truth corpus. Contains 35+ files across 5 categories. All files are originals — never modified by the system. The knowledge loader scans this directory recursively to build the corpus used by all generators.

3.2 Generators (`tools/`)

Four specialized generators, each consuming the full corpus:

Generator	Command	Output Dir	What It Produces
Recognition	<code>recognition</code>	<code>generated/recognitions/</code>	Achievers-style recognition messages
Training Text	<code>training</code>	<code>generated/training_texts/</code>	Training communications with 5-step structure
IDP Report	<code>idp</code>	<code>generated/idp_reports/</code>	Full IDP reports with SMART goals, evidence
Communication	<code>communication</code>	<code>generated/communications/</code>	Huddles, safety alerts, team emails, mgmt updates

3.3 Feedback Loop (`feedback_loop.py`)

Every generated document is:

1. Saved to `generated/` (organized by type)

2. Logged in `feedback_loop/generation_log.json` with full metadata
3. Automatically included in the next corpus build

This means the system grows smarter with each generation — patterns, vocabulary, and examples from previous outputs inform future ones.

3.4 Knowledge Loader (`knowledge_loader.py`)

Scans both `knowledge_base/` AND `generated/` to build a unified corpus. Provides category-filtered access (recognitions, training, personal records, etc.) to all generators.

3.5 Templates (`templates/`)

Markdown templates following CarMax's 5-Step Communication Structure:

1. Greeting
2. Purpose Statement
3. Key Points
4. Value Connection
5. Positive Close

4. Data Flow

1. User requests document via CLI **or** AI assistant
2. Knowledge **Loader** scans `knowledge_base/` + `generated/`
3. Generator selects relevant **content** by category
4. **Content** is assembled using templates + CarMax vocabulary
5. Output **saved to** `generated/[type]/`
6. Feedback Loop registers the file in `generation_log.json`
7. **Next** generation automatically includes this output as source

5. CarMax Values Integration

Every generated document is filtered through the four CarMax values:

Value	How It's Applied
Win Together	Inclusive language (we/our/team), collaboration emphasis
Put People First	Recognition, appreciation, growth-focused language
Go For Greatness	Excellence standards, improvement encouragement
Do The Right Thing	Integrity, accountability, procedure compliance

The vocabulary standards from `CarMax Vocabulary & Philosophy.md` are the authoritative source for tone and language.

6. AI Assistant Navigation Guide

When navigating this system as an AI assistant:

1. **Start with** `docs/identity.md` and `docs/Personal Sub-Prompt for Gustavo.md` to understand the user context
2. **Use** `knowledge_base/carmax_reference/CarMax Vocabulary & Philosophy.md` for tone/language guidance
3. **Check** `feedback_loop/generation_log.json` to see what's been previously generated
4. **Run** `python tools/carmax_cli.py status` to get a quick system overview
5. **Generate documents** via `python tools/carmax_cli.py [command]` with appropriate arguments
6. **All generated content** automatically feeds back — no manual steps needed

Key Files for Understanding Gustavo's Profile:

- `knowledge_base/personal_records/Self-Evaluation Summary.md` — comprehensive career history
- `knowledge_base/personal_records/Gustavo Guallar 2025 Overall Performance Rating & APR Summary.md` — current ratings
- `knowledge_base/assessments/` — Harver and MDP assessment data
- `knowledge_base/recognitions/` — full recognition history (given and received)
- `docs/Personal Sub-Prompt for Gustavo.md` — career goals and coaching preferences
